SALESFORCE

Data model

Objects and lookups from the schema builder view. The field is listed on the object that stores it.

Crow's foot — object that holds the lookup | Bar — record the lookup points to | Custom object | Names match the labels in the source diagram.

SALESFORCE

Relationship index

Nineteen lookups. The field lives on the first object and points to the second.

LOOKUP FIELD	ON OBJECT	POINTS TO	NOTE
PROSPECTS AND CONVERSION			
`ConvertedAccountId`	Lead	Account	Set when a lead is converted.
`ConvertedContactId`	Lead	Contact	Set when a lead is converted.

`Nominator__c` · employee	Award_Nomination__c	User	Labeled “employee” on the schema.
`Nominator__c` · customer	Award_Nomination__c	Contact	Labeled “customer” on the schema.

Reading the source. Labels are the ones visible on the schema builder capture. Objects were collapsed there, so this sheet lists relationships rather than every column.
Standard behavior, beyond what the capture can show: CampaignMember.CampaignId is master-detail. ParticipantId, WhatId, LinkedEntityId, and TargetObjectId are polymorphic;
only the target drawn in the capture is included. “Potential HQ to launch” is the self-lookup label on Account. Qualifiers such as “other customer”, “employee”, “customer”, and “escalation”
are the words printed beside those fields in the capture.
